MEMORANDUM FOR: Deputy Director for Science and Technology

ATTENTION : DD/S&T Comptroller

SUBJECT : FMSAC Comments on Proposed Program Structure

**REFERENCE : Memorandum from DD/S&T Comptroller, Subject:
Proposed Agency Program Structure, dated 17
August 1967, DD/S&T-3335-67**

FMSAC has reviewed the proposed DD/S&T alternate to the
OPPB program structure and has the following comments:

a. It is felt that a single sub-category, "Science and Technology" or "Scientific and Technical," would be satisfactory and could encompass all intelligence on missile and space technology being produced by FMSAC and OSI. Work being performed under this sub-category could easily be broken down into the elements established for the Contract Information System (CIS).

b. I agree with OSI's contention that there should be some way to account for the efforts expended by DD/S&T personnel in the formulation of National Estimates. In addition, a provision is also lacking to account for support provided by both Offices in the current intelligence area. Addition of these elements would require a decision on the method of pro-rating manpower and expenditures.
